"The Bureau's first assemblage of basic statistics by counties, specifically designed for the use of businessmen in measuring industrial and consumer markets, was published in 1929 under the title, 'Market Data Handbook of the United States.' Considered as a pioneer in its field, it was followed in 1932 by 'General Consumer Market Statistics,' and in 1936 by 'Consumer Market Data Handbook,' each of which brought up to date the information applicable to consumer markets. The supply of all previous editions is practically exhausted...

"The procedure in sales analysis and market research involves studying pertinent facts on small geographic units, putting these facts together to measure market potentials, and then estimating the current value of these markets to a particular company for any one or more of its products. In the 1936 edition of this volume, 25 items of marketing information were broken down by States, counties, and, where possible, by all cities and towns which in 1930 had a population of 2,500 or more. This 1939 handbook gives that same break-down and includes a total of 82 statistical series. For purposes of simplicity in presentation, the data are placed in five groups: namely, Population and Dwellings; Volume and Type of Business and Industry; Employment and Payrolls; Retail Distribution by Kinds of Business; and Related Indicators of Consumer Purchasing Power." - Foreword, p. V.
